

## October 2006 Web Version-Tech Questions/Answers

Question	Response
Can dementia be used for time and task type things?	Dementia can score anywhere in the tool that is appropriate as long as they are following scoring instructions.
Can medications and counseling be extra effort for a score of 5?	You should not count medication as support or effort, even for a score of 5. We are to score clients "as is," not how they would be without their medications. Counseling can not be considered extra effort of support.
